

# NST INOX Pickling paste

- For all types of corrosion resistant materials
- Short reaction time
- Slow dry-out process
- Easy removal
- Can be applied to moderately hot materials (<40°C).

## Product description:

NST Pickling Paste is used for recreating a perfect corrosion resistant surface on stainless steels. Removes surface contamination like welding oxides and corrosion products. For treating larger areas use NST Pickling Spray. For optimal results avoid direct heat/sunlight during application as this will dry out the paste and reduce its effect.

This product is toxic and has a strong caustic effect. For use in ventilated surroundings with prescribed protective equipment.

Please observe the hazard and safety advice on container label

## Reaction time(20°C):

AISI 316L :20 min.  
SAF 2205(Duplex) :60 min

## Consumption:

150-250 m/pr.kg

## Packaging information:

2kg Box

## Reference/date:
